

When you set out to improve the best grinder on the market... and it seems impossible

Precisely grinding the coffee just before brewing is the key to a perfect espresso with all its aromas and nuances.

If you already own the Q10 Evo grinder, you'll know that its new DCS dosing system increases the regularity, consistency and precision of each dose. Its three working modes (Dose on demand, grind on demand and manual dose) perform the miracle of creating the ultimate coffee. So when the R&D+i department set out to improve this technological gem, it developed the "Espresso link" App for Android and iOS so you can control the Q10 Evo grinder from the palm of your hand and improve its performance.

How many times have you wanted to know how much your customers actually consume?

The Espresso Link App makes this dream come true for roasters who can finally know if the number of kilos of coffee delivered matches the number of coffees made by their customers at each establishment.

With the Espresso Link App, you'll be able to monitor the productivity of the grinders installed at each of your customers' establishments. It will also help you optimise your grinder's service life with automated alerts for maintenance, cleaning and grinding discs.

Monitor the profitability of your Q10 Evo Grinder from the palm of your hand

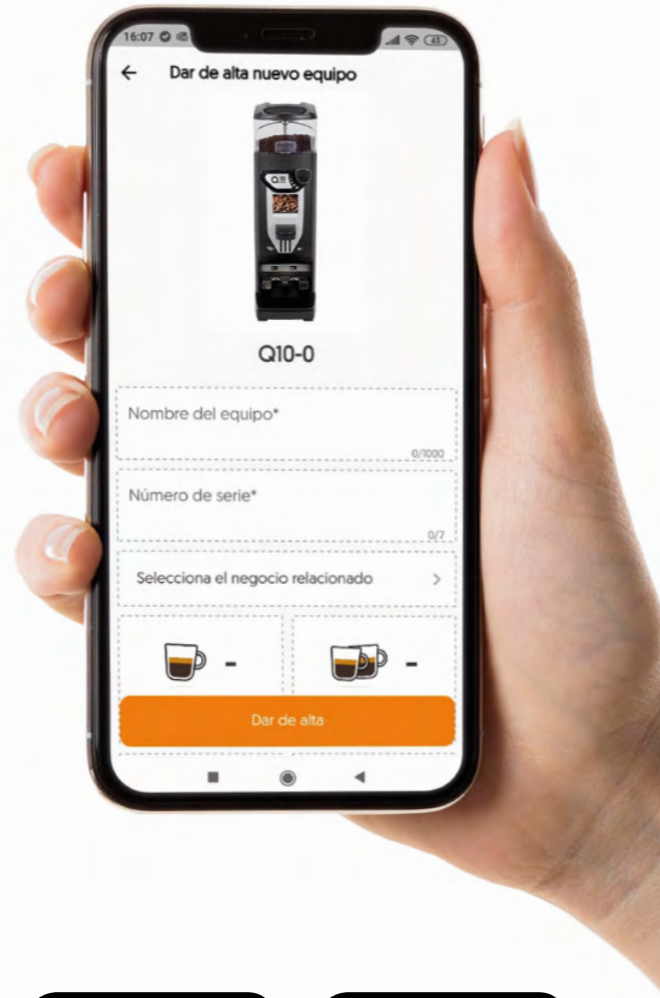

If you have a Q10 Evo Grinder with Bluetooth connectivity, you're in luck. You have everything you need at your fingertips to improve the performance and productivity of each grinder. A unique innovation on the market that you get at no extra cost with Quality Espresso.

The "Espresso link" App, which collects data from the grinders installed at each establishment, can measure the number of coffees made and provide a forecast of each establishment's consumption to cover its needs effectively and accurately. Furthermore, with the "Espresso link" App, you can extend your grinder's service life by keeping up to date with cleaning, maintenance and grinding disc change schedules, thanks to its automatic notification system.

With the "Espresso link" app, you can see all the grinders installed at each establishment and compare their data very easily and intuitively. What's more, you can:

- Assign to each customer their operational establishments and grinders.
- Remotely measure the number of coffees made by each grinder.
- Record the number of kilos of coffee delivered for each grinder.
- Send alerts to notify about cleaning processes.
- Plan dates for maintenance and the replacement of grinding discs.
- Monitor the location and correct operation of all grinders through the app's web portal.

The Q10 Evo grinder: big on functionality, huge on innovations

Consumption monitoring

Automatic syncing with the management web portal

Extend the grinder's service life and operation

Strategic customer management

Increased performance and profitability

Maintenance and cleaning alerts
